Title: Lowki

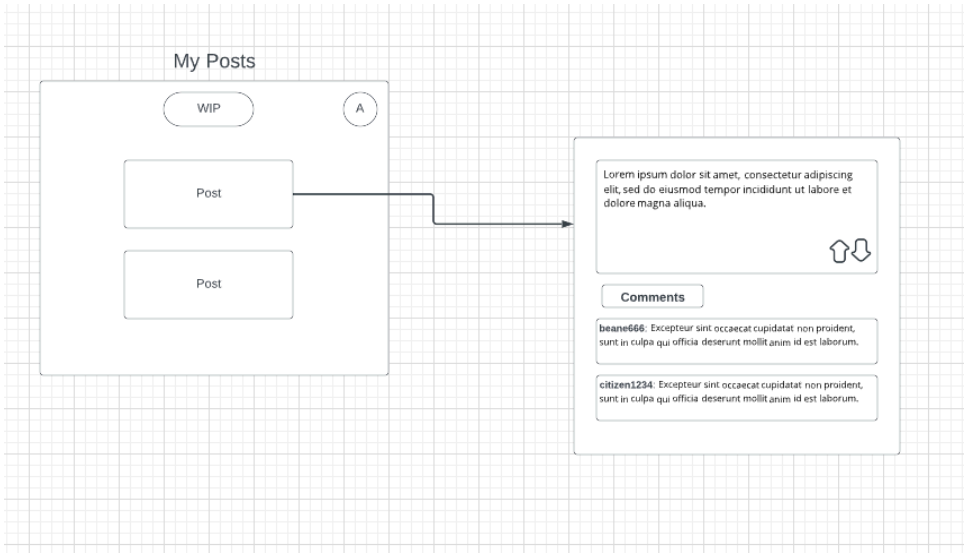

Description: A web application where it is safe for our users to be able to rant about work. It will have the same functionality as social media platforms. Also gives you the information about the company.

User Story:
As a person who is stressed over work,
I want a platform where I am able to rant about my bad experiences at work.

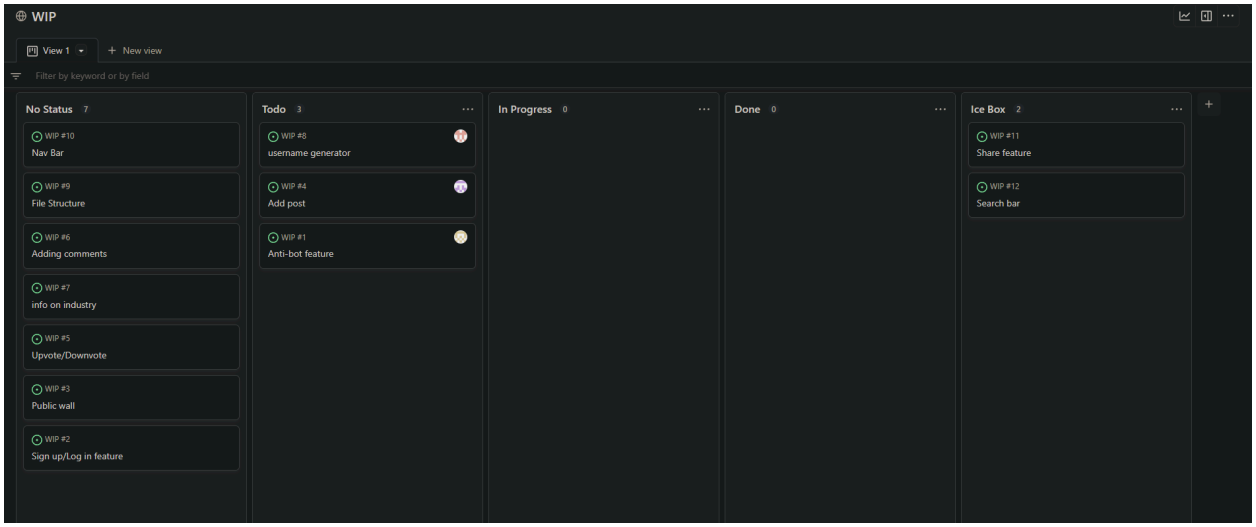

Acceptance Criteria:
GIVEN a Rant web application
WHEN I sign-up/log in
THEN I am presented with a anti-bot feature
WHEN logged in
THEN I am presented with a public wall
WHEN I want to rant
THEN I just type on a rant box to post it in the public wall
WHEN someone likes/dislikes the post
THEN the users are able to like/dislike and comment on the post
WHEN I want more information about the industry
THEN I am able to get the information about the industry

Wire Frame/Flow-Chart:

Kanban(With breakdown of tasks):

Different Ideas:

- Social media
    - Crypto currency
        - Being able to tip people for their posts
        - Create our own crypto token
    - Stop bots
        - Using time-stamp
        - How often they are online
        - How many pictures
- Worklife rant /**3 votes**
    - Reviews on the companies
        - Leadership
        - Pay rate
        - Etc
    - Stop bots
        - Using time-stamp
        - How often they are online
        - How many pictures

- Start-Up Companies Job offers
- Pop Up Party
- Pick-Up Game
    - Different sports
    - RSVP
